

My first L^AT_EX document

Leighton Flanagan

November 2025

Abstract

This is a simple paragraph at the beginning of the document. A brief introduction about the main subject.

We have now added a title, author, and date to our first L^AT_EX document!
Some of the **greatest** discoveries in science were made by *accident*.
Some of the greatest discoveries in science were made by accident.

Figure 1: An image from a GIS protocol.

As you can see in figure1, the dependent variable is highlighted.

- The individual entries are indicated with a black dot, a so-called bullet.

- The text in the entries may be of any length

1. This is the first entry in our list
2. The list numbers increase with each entry we add

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein

In physics, the mass-energy equivalence is stated by the equation

$$E = mc^2$$

discovered in 1905 by Albert Einstein

In natural units ($c = 1$), the formula expresses the identity

$$E = m \tag{1}$$

Subscripts in math mode are written as a_b and superscripts are written as a^b . These can be combined and nested to write expressions such as

$$T_{j_1 j_2 \dots j_q}^{i_1 i_2 \dots i_p} = T(x^{i_1}, \dots, x^{i_p}, e_{j_1}, \dots, e_{j_q}) \tag{2}$$

We write integrals using $\int$ and fractions using $\frac{a}{b}$. Limits are placed on integrals using superscripts and subscripts:

$$\int_0^1 \frac{dx}{e^x} = \frac{e-1}{e} \tag{3}$$

Lower case Greek letters are written as ω , δ etc. Upper case are written as Ω , Δ

Mathematical operators are prefixed with a backslash as $\sin(\beta)$, $\cos(\alpha)$, $\log(x)$ etc.

1 AMSmath Example 1

The well-know Pythagorean theorem $x^2 + y^2 = z^2$ was proved to be invalid for other exponents, meaning the next equation has no integer solutions for $n > 2$

$$x^n + y^n = z^n \tag{4}$$

2 AMSmath Example 2

This is a simple math expression $\sqrt{x^2 + 1}$ inside text.

And this is also the same: $\sqrt{x^2 + 1}$

To display math using AMS math, do this:

$$\sqrt{x^2 + 1}$$

...or this:

$$\sqrt{x^2 + 1}$$

I will start this paragraph and then add
a manual line break which causes the text to start a new line in the same
paragraph. I can also use `\newline`
to do the same thing

cell1	cell2	cell3
cell4	cell5	cell 6

Table 1: Look its my table
